

Cardinal Store Locator plugin for WordPress

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The Cardinal Store Locator plugin for WordPress was built with the Google Maps API, WordPress Settings API and my open source jQuery Store Locator plugin and integrates with WordPress core features such as custom post types for location data and custom taxonomies for location categories and filtering. It was programmed following the WordPress Coding Standards, is responsive by default, can read Snazzy Maps styling, makes use of Handlebars for simple info window and location list overrides in addition to several other features.
