Our PHP-based Catering System will help you boost your online business and improve customer service in one go. Clients can review your mouth-watering menu organized in separate categories and presented with high-resolution images. Add as many food items and drinks to each category, set prices, sizes, show and hide them on the front-end. Create event-specific catering packages for private and business occasions such as birthday parties, weddings, corporate cocktails. Specify how many people the package is suitable for and allow customers to make additional adjustments. The front-end UI of our catering software is fully responsive so that clients can browse your bill of fare and make orders and payments on the go using all kinds of mobile devices. Keep track of all orders and upcoming deliveries on the intuitive dashboard of our catering booking system. Add and edit catering orders from the back-end, check customer details and use them for your email marketing campaigns.
