Mobile Number	{value_mobile_number}
Email	{value_email}

This is a Multi-User generic program for taking credit card orders on-line and having the customers order and information emailed to you. Two scripts are placed on the secure server at your ISP and those two scripts will process the data for all the users on your system. Included is Credit Card Verification. This checks the card number to make sure it is a valid card. The program comes with the Set-Up Wizard which makes it very easy for anyone to make a shopping cart/orderform. You can also include shipping charges and state taxes. This program is also fully compatible with SSL, and can be used with a secure server.
