Mobile Number	{value_mobile_number}
Email	{value_email}

CFADSecurity_Framework is a powerful and secure authentication system for your website using your Active Directory user accounts. CFADSecurity enables you to provide a login system to your Cold Fusion website using your existing Active Directory user accounts. CFADSecurity allows you to create security levels and then assign users to those security levels for as much as security as you need. CFADSecurity has the ability to not only secure the complete page but parts of the pages as well depending on your security level. For example: You may have a page that you want anyone who is a member of the "Users" group to only see the top of the page but anyone who is a member of the "Administrators" group can see the whole page. You can get as creative as you wish. Easily add a Active Directory security around any of the pages within your site!
