cgi-mailer

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

cgi-mailer is a simple form-to-email gateway system enabling users to have HTML form input formatted in a user-defined way and sent to an email address, without needing a new CGI program for each new HTML form or any user access to the cgi program. cgi-mailer does not need to reside on the same server as the HTML forms that use it, so you only need to install it once for your entire organisation.
