

# Change Button Text On MouseOver

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This randomly picks a string to use and places that string on the form button. This runs on a mouseover event, so that everytime the user places the mouse over the button it's text will change.
