Check a Phrase

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Replace hundreds of lines of code with a couple of simple lines. The Check Phrase DLL will check a phrase against a fully customized configuration file, with characters you specify. You put the characters you want to be considered invalid and the dll does the rest. More features will be added with the next release.
