Where in the world should you travel - or perhaps even relocate - to pay less, earn more, and improve your living conditions? To help you answer this complex question, City'O'Scope was created as an interactive tool for visually analyzing prices and earnings around the world. Used data surveyed by the Swiss Economic Research group of UBS about the purchasing power in almost 60 cities around the world. Each city is characterized by more than 100 different attributes such as the price for food, salary of engineers or the working time required to buy a hamburger.
