The iPanner applet is an extremely simple-to-use image panner with mouseOver. Just give it an image, and it runs... a great pro tool of course, but also a fine choice for Java newcomers. iPanner is linkable (url and target or frame), and also has optional parameters to control start direction, speed, and mouse reaction. The FREE kit download has everything you need to get up and running quickly with a panoramic display on your site.
