CodeBrainSlider is a multi-image slide-show presentation tool. It will handle up to 100 images, and each image is linkable (URL, frame, target). Images can be of different sizes and widths. A VerticalMode parameter lets the applet auto-center vertically, or position the images all against the top or the bottom. Additional parameters allow control of the thickness of both the frame and border, and the colors of the frame, the border, and the link boxes for the images. The applet features simplicity of setup and a very small, fast, single .class file. Protective coding limits parameter errors, and the parameter set is quite easy to use. Data sheets, sample set-ups and graphics are included with the download kit.
