Comment Form / Post Feedback Tutorial

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Feedback is very valuable to not only the web designers, but to other visitors as well. This tutorial shows you how to create a script that will display comments from users, and allow users to post their own comments. The script is very secure because it converts HTML and Javascript to text. It allows the use of BBCode for user designated formatting. The script is written in PHP, and uses a MySQL table to store all the information. Can be used on an unlimited number of pages. Looks great, but styling can be changed by editing the css in the script. Easy setup.
