

Community Portal (CommPortal)

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

CommPort is a "Community Portal" generator based on Perl and MySQL that can be tailored for any location. Each user gets a personal portal page to which they can add their own "channels" or select from a growing list of pre-prepared local, national and international content. This allows any individual to always have a page of their own personal favourites in front of them. Channels may be either "active" with continually updated content such as weather or news headlines or "passive" with collections of links. Features: User customizable portal page, Imports standard RSS files for use as channels, Automatic export of channels as RSS, Multiple user access levels, and Internationalization.
