

Component conversion Utility

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The Component Conversion Utility is designed to minimize the time needed to create skeleton code in a variety of languages. Given a database connection, for example, the CCU can use existing tables to create skeleton Java code. In addition to translating programming languages, it allows a user to define entities/attributes in a friendly GUI. Supported languages include Java, HTML/JavaScript, XML, SQL, VB .Net, and C. Requires JRE 1.4+.
