

## contacts.droid

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

"Lookup the user's addressbook for numbers, mail addresses, as well as chat and Twitter usernames and get information about the contact back easily. No more dealing with cursors and SQL-statements. It's all done with a few lines using contacts.droid. Working for Android 2.0+."
