

contacts.droid

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

"Lookup the user's addressbook for numbers, mail addresses, as well as chat and Twitter usernames and get information about the contact back easily. No more dealing with cursors and SQL-statements. It's all done with a few lines using contacts.droid. Working for Android 2.0+."
