

Contador PHP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Contador PHP is a simple and effective way of getting an instant report of number of downloads per month, source pages with more clicks, and details such as: IP, day, time. At difference of other counters you get instant feedback to adjust your campaign. To integrate it, first create a new database, update the configuration file and organize files for download in the same folder (recommended), create a link of this type: www.site.com/download.php?file=software1.zip&refe=front You can integrate cookies instead of the variable ref in the url.
