

Convenient javascript calendar (Date Picker)

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

In-page (no extra cumbersome windows); Tested in major browsers (IE, Firefox, Chrome, also on iPhone & iPad); Windows-like look by default, can be customized with styles, convenient user interface; Incremental 1-click day/month/year change for minor changes without opening the calendar; Open months list - no need to scroll through months; Configurable parameters: order of month and day (MMDD / DDMM), date parts delimiter and first day of week (Monday or Sunday only); Optional allowed years range; Optional initial value (different formats + "today"); The date field can be disabled/enabled; OnChange event is supported for advanced scripting so that multiple calendars on the same page can interact. Paste with keyboard; fixed gray current option in selects out of focus in Chrome; go to today. Last update: 28.07.2019.
