<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

CookieStats is a small perl script that scans the cookies\_log generated by Apache and produces a list of accessed pages and unique cookies. This has the effect of screening out duplicate accesses by single browsers and gives a relatively hard lower limit on the number of people accessing a page. Not all browsers support cookies, so some people are missed. This error is, however, under 10%.
