

CookMail

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

CookMail is a powerful HTML email form CGI handler. Without doing any programming, HTML writers (professional and novice) can create any email forms utilizing the following key features of CookMail: automatic handling of all input fields, total control of the email message format and the CGI output, run CGI scripts (such as a counter) in the output, automatic/manual multiple selection handlings and MIME support.
