

CookMail

Address {value_address}

Contact Person{value_contact_person}Mobile Number{value_mobile_number}

Email {value_email}

CookMail is a powerful HTML email form CGI handler. Without doing any programming, HTML writers (professional and novice) can create any email forms utilitizing the following key features of CookMail: automatic handling of all input fields, total control of the email message fomat and the CGI output, run CGI scripts (such as a counter) in the output, automatic/manual multiple selection handlings and MIME support.
