

# CountDown 1

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Very simple : - drag the component on the stage - resize it (as you would resize a button component) - look at the parameters defined for the component and modify them as you want => Make some tests to view the range of possibilities I offer to you All the variables have explicit names, so there shouldn't be any problem.
