

CountDown 2

Address {value_address}

Contact Person{value_contact_person}Mobile Number{value_mobile_number}

Email {value_email}

Very simple: - drag the component on the stage - resize it (as you would resize a button component) - look at the parameters defined for the component and modify them as you want => Make some tests to view the range of possibilities I offer to you All the variables have explicit names, so there shouldn't be any problem.
