CPAINT (Cross-Platform Asynchronous INterface Toolkit) is a true AJAX (Asynchronous JavaScript+XML) and JSRS (JavaScript Remote Scripting) implementation that supports both PHP and ASP/VBscript. CPAINT provides you the code required to implement AJAX and JSRS on the back-end, while the returned data is manipulated, formatted, and displayed on the front-end in JavaScript. This allows you to build web applications that can provide nearly real-time feedback to the user, including nearly real-time data updates.
