

Create RSS channels from HTML news sites

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This article shows how to turn any news site into a Remote Site Summary (RSS) web service using Perl. Using several modules from CPAN network, it shows how to: download the page, parse the HTML on the page, and encode the summary info in RSS.
