

Creating a Category Site with ASP

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This tutorial shows how to implement a catalog site that is build with Active Server pages and SQL Server. Along with the implementation there is source code and a discussion of the advantages and disadvantages of creating a catalog site that gets its content from a database. Included are pages for displaying products, creating a menu page, category page, and running a search across a database.
