

Creating a file based logging script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

In this tutorial I will show you how you can create a small and simple PHP script to log your visitors activity into a file. You just need to add 1 line to each of your page to enable logging and the statistics will be collected in a html file so you don't have to setup any database for this task.
