

# Creating a quick and dirty jQuery contentEditable Plugin

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

The nice thing about contentEditable is that it maintains original markup and is in effect live editing of text in the currently formatted text. So if unlike wwEditable which used a textbox to copy content and had to figure out what CSS attributes to copy to make the text look right and then handle markup conversion issues, the text you type into a contentEditable block is live HTML.
