

# Creating a simple mail sender class with PHP

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

In this tutorial I will show you how to create a simple mail sender class in PHP. Sending emails with PHP is a lot easier than you would think, however you need to care about some settings to avoid moving your emails into a spam folder.
