

Creating a Suggestions Dropdown for your Search Input Boxes

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This script uses iframe loading techniques to create a fast and reliable way of pulling suggestions for your input search boxes. The script consists of a js file that contains core functionality, a css file for styles, and two images which indicate the application's current state and provide additional functionality. The suggestions can be customized to be anything you want and instructions on how to do this are also included. Additional functionality includes matching whole phrases and capitalizing the suggestions on the dropdown.
