

# Creating websites with frames and search engine optimizing

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This tutorial shows you how to make frames and open subframes within the mainframe. You will learn how to preserve the function of back button and prevent opening your frameset page within another (foreign) frame. The searchengine indexing problem will be overpassed by giving some content within the Nonframes-Tag. This tutorial intend to give you a quick fix, how to make a professional website with frames.
