CRM Interface

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Save yourself time with a customizable interface for a CRM application. This provides an excellent foundation and starting point if you are tasked with creating any type of contact manager or CRM application for a business. All assets are provided. The data is currently pulled in from an xml file as a basic simulation of data. The expectation is that you will integrate your services layer, which is very easily done. Feel free to contact for assistance if you are having trouble integrating your services. This will work with any SOAP, REST, or AMF service; no restrictions on it. Feel free to contact me with any questions or if you run into any problems with it, http://www.flexden.net/user/88/contact
