Cross-browser javascript IsNumeric() method

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

To make a Client-side numeric textbox control using javascript is a common task in web development. Numeric checking may varried based on business logic. Like positive int, positive decimal, signed int or signed decimal. In my post i will try to focus on each requirement plus cross-browser compatibility. Here i will try to describe the script for 4 different methods for 4 business cases. Choose what you need. 4 cross-browser supported Client Side javascript IsNumeric() methods are as follows:
