Mobile Number	{value_mobile_number}
Email	{value_email}

Allow your users to play this Scrabble(c)-style game on your site. Not only will they enjoy playing with other gamers all over the world, but the game emails sent on each move contain your customised advertisement. Get the 'word' out to people while they have fun! Like Scrabble? Wish you could play with family and friends who are miles away? Now it's possible with the online Crossword script. Great, realistic, Scrabble-style action Letter bag, personal tray, password protected Automatic turn sequencing and email updates Unlimited simultaneous games Online rule book Winner announcements Administrative controls such as game deletion, score adjustment, and more. Offensive language filtering Two, three, and four player games Ability to send a message to other players on each move Advertisement potential- put your ad in each email message Letter bag viewing and swapping of letters Unplayed games automatically deleted Version information included on admin screen Unlimited UNDO for each play Complete support Free updates This script has received a lot of attention. Because it's server based, and not Java based (Java and JavaScript are dependent on the users browser), WebTV users love it. There are plans in the works to add two big features. One is a more extensive admin section allowing the administrator to control advertisements both on the game screen and in the emails, as well as have access to deleting, point correcting, and more. The other big plan will require a significant rewrite: complete points processing. Right now users must enter and correct their own scores. This has not presented much of a problem, since Scrabble users usually play fair, and it's hard to cheat. (Undo-ing a turn because of a bad word or bad score forfeits the users turn). Just the same, this development is planned for the future. Now is a great time to purchase the registered version of the Online Crossword Game. ACT NOW! You'll receive unlimited updates for this game as they are made. New! Thanks to a fellow programmer, Jim Melanson, this script now calculates points automatically at each turn. INCREDIBLE!
