csASPZipFile

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This ASP component creates zip files on the fly on the server. The resulting zip archives can either be saved on the server or streamed to the browser. Zip files can be split to form spanned archives to allow smaller files to be downloaded. The component also allows the control of binary file downloads. Some file utility functions are included as well as an access code generator. An HTTP function allows files to be retrieved from a remote web server and either saved or streamed. Free trial available. Supplied as either 32 bit or 64 bit.
