This is an ASP component (COM object) to transfer files between servers using FTP. Simple command set to upload and download single files, lists of files or complete folders with subfolders. Additional commands encapsulate the FTP protocol allowing files to be renamed and deleted, directories created and deleted and their contents listed. Functionality to transfer files using a binary variable as well as to and from disk. Free trial available with full instructions. Supplied as a choice of 32 bit or 64 bit.
