This ASP image component includes a wide range of editing functions to resize, create or edit images dynamically in a script or server side environment. It has support for JPG, BMP, GIF, PNG, PSD, TIF and PCX formats and exports to PDF. It can merge images with optional transparency, including an alpha channel, and is suitable for adding logos or watermarks. It can draw text, lines and shapes. Adjustments can be made to brightness, contrast, hue and saturation. Colour palettes can be viewed and edited. Images can be cropped, rotated and flipped. Metadata support allows for the extraction and edit of IPTC data, Exif and XMP in JPEG, TIFF and PSD images. ICC colour profiles can be retained during processing. Read and write images to disk, to binary data or database blob fields, or stream images to the browser. Use with csASPUUpload or other components to edit or resize upload images dynamically following an upload. Free trial available with examples on our web site. 32 bit or 64 bit.
