csIniFile

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

With this component you can read, write and create Windows style ini files from an ASP script. Data types include strings, integers, reals, dates and booleans. You can loop through a file's sections or keys using collections. New INI files can be created on the fly. Some file utilities are also included. There is a free trial available which includes full instructions. 32 bit or 64 bit.
