CuteFlow is a webbased document circulation/workflow tool. Users are able to define "documents" which are send step by step to every station/user in a list. It's an electronical way for doing (i.e. internal) document circulations. A document can be assembled from input fields that could be filled by the receiver of the document. So after a completed circulation you will have a completely filled document. Also Attachments to the document are possible (i.e. for illustration material).
