Offers a turnkey solution to bring your existing business online in minutes, regardless what you sell. It is a comprehensive, scalable, and yet fully automated database-driven eCommerce online catalog/storefront builder. CyberBuild is designed to handle millions of stock items at ease (i.e. if you got that many). So you will never need to worry about overloading your Web server. Once installed on the server, you can simply upload your products either via the Web or from database to database. The software automatically builds the categories, sub-categories, brands as well as the browsing sequences between them. It also analyses and pre-indexes the keywords in your product descriptions. This last step is crucial for it to offer lightening search speed on the storefront, a technology similar to that used on Google. You then get a fully operational Web site loaded with your own products and ready to take order! It further includes a WYSIWYG online store wizard and a state-of-the-art Search Engine technology to help promote your business.
