

Database-Driven WWW Help System

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The help system presented in this article is self contained and can be updated and altered without impacting the original Web application. The help icon in the Web application dives into an application system for the help option. Each Web page has its own separate help page with a database that contains one row in a table for every calling Web page. Sample code is provided.
