dateRange Class for PHP

Address   {value_address}

Contact Person   {value_contact_person}

Mobile Number   {value_mobile_number}

Email   {value_email}

dateRange is a simple php class designed to help you determine if a date is in a given range. You can create a new dateRange with a start date and an end date. You can also optionally give it a name and create a list of dates that are "excluded" (i.e. within the start and end dates, but not considered valid for your purposes). Useful as a convenience class for calendar modules, for form validation, for determining the current season, and all kinds of other things.
