DBSight is a deployable J2EE web application that can create one or several search engines on any JDBC relational databases. It's a highly configurable platform to create search. It can crawl your database, create indexes, display search results. You can customize most of the components, and manage the indexes -- all by web interface. * Scalable, online demo <http://search.dbsight.com> holds 1.2G data, 1.7 million records * Work on live systems, new or old legacy systems, without changing existing code. * Customizable crawl, customizable indexing, customizable searching, customizable results templates
