Deadlock User Management System

Address   {value_address}

Contact Person   {value_contact_person}

Mobile Number   {value_mobile_number}

Email   {value_email}

Deadlock is a powerful, customizable, fully featured user management system which protects web directories and documents using Apache's htaccess and htpasswd. Deadlock is written in PHP and uses MySQL to store user information. It features email verification and administrator approval capabilities requiring that the administrator approve accounts before they become active. Deadlock supports both basic and digest authentication.
