

debugHelper

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The class provides JAVA style error messages for PHP. It has a nicer display of variable contents than PHPs print_r() function. It can take execution times, has a better highlight_file() function and a couple of other handy functions. Works with PHP4 and PHP5.
