

# Declarative programming of JSP web sites using XML.

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

In any JSP based web site, there could be lots of repetitive web pages. By using tag libraries and XML based definition files, this can be generalized into a framework based rendering. This article illustrates such usage to render a web site.
