DiamondList is a free open source ruby on rails wishlist management program. It allows you to track one or more wishlists for one or more people, for any kind of event! Whether you want to organize a wishlist for your friend's birthday family, or create wishlists for everyone in your family for Christmas, DiamondList can do it! Also, DiamondList allows the target of the wishlist(the gift-receiver) to log in and add any new gifts that they might want. This allows the people managing the wishlist(the gift-givers) to see anything new that the person(the gift-receiver) desires! Of course, the wishlist is protected so the person(the gift-receiver) cannot see what other people are going to giving them as gifts. Demo Login: /test or /test
