<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

DigitsyGrid really understands your database query and recreates it on the fly to include native database-side paging and sorting. DigitsyGrid can even recognize Image data type in the result set of your query and display images in the grid without any efforts from your side. DigitsyGrid creates MS Excel files for the displayed page or for all records found, and you will see all those images right in the Excel spreadsheet!
