

DirectoryURL

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This script allows you to easily run a quick and dirty self replicating website system. Visitors sign up, choose a username, pay thru authorize.net and get a web address such as <http://secret.to/username>. It also comes with a password protected administrative panel to keep track of what's going on in your system. You can also add password protection to the users directories or possibly even FTP login for them, etc.
