

DocBook SGML Toolbox

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

DocBook SGML Toolbox installs DocBook, OpenJade and other SGML Utilities with EASE using an automated install script. From one DocBook file you can produce HTML,PDF, RTF, and ASCII text. While DocBook is a great language and documentation system its associated tools are a REAL BEAR to install especially if you are new to Unix/Linux. DocBook SGML ToolBox solves this problem by installing everything for you (13 different utilities including Openjade, DocBook 3.1, 4.1, htmldoc, Crocsdb, Genrd, and others), even (optionally) automatically configuring your environment variables,making and generating RPM, Debian, or Slackware binary packages (as you choose) so that you can uninstall or reinstall the packages when you want. Will save you hours of installation time.
