Document Creator is a an intuitive back-end script developed by PHPJabbers to facilitate the electronic generation of standard documents for multiple clients. Create unlimited templates, rename and distinguish them more easily, put the respective tokens (client details) in the right places and generate your document with a single click. Add countless customer profiles with the necessary details and update them later. You can deactivate a customer profile without deleting it from your database. Add text content using a simple WYSIWYG editor, as well as related images, tables and graphics. If the document is for online purposes, you can also insert videos and external links. The document generation software allows you to preview, print, download and send documents to clients. Depending on your specific needs, you can translate the document generator into various languages and enable a language bar.
